

WinBio aims to promote the value of Portugal's interior regions

Coordinated by BLC3, WinBio – Waste&Interior&Bioeconomy aims to promote the cross-border regions and ecosystems of the Central, Northern, and Alentejo regions of Portugal. It aims to demonstrate the quality and potential of their bio-resources through collaboration with entities within the national scientific and technological system.

The project focuses on the economic valorisation of four major technological areas within the Bioeconomy:

Forestry Row

Agro-food Row

Aquatic Row

Endogenous Biological Resources
